3. Araogya Nyas Kalyan Oration by the Peritoneal Dialysis Society of India presented at the APCN-ISPD conference 2023
4. Young Investigator grants and International Speaker grants by the ISPD, ISN and JSDT for research presentations in various conferences

Candidate's Statement

Despite densely populated nature of our region and high prevalence of renal diseases, we currently have limited data on various diseases and visibility within the academic community. As deputy-chair of SARB and ISN Councillor, I aim to address these challenges by presenting unique perspectives of our region on the ISN agenda. By fostering closer collaborations between regional societies, we can work towards establishing regional registries. Additionally, I will strive to increase representation of our region in the ISN initiatives like Sister Renal Centres and individual fellowships/grants, thereby providing our colleagues with broader international exposure.

With my current role as committee member of ISN-SARB, I have gained valuable insights into the operations and requirements of our regional board. Furthermore, my experience serving on the executive boards of various national societies, such as ISOT and PDSI, has equipped me with extensive expertise in liaising with government entities, academic institutions, private organizations, and peers. This experience has allowed me to effectively represent the interests of our community and establish new collaborations.

These initiatives align with ISN's mission of advancing kidney health worldwide through education, grants, research, and advocacy. By implementing these strategies, we can contribute to the overall success of ISN's mission.
